Model Driven Software Development Workflow Example (User View)

PIM

SmartMARS – Metamodel (Modeling and Analysis of Robotics Systems)

user models component hull

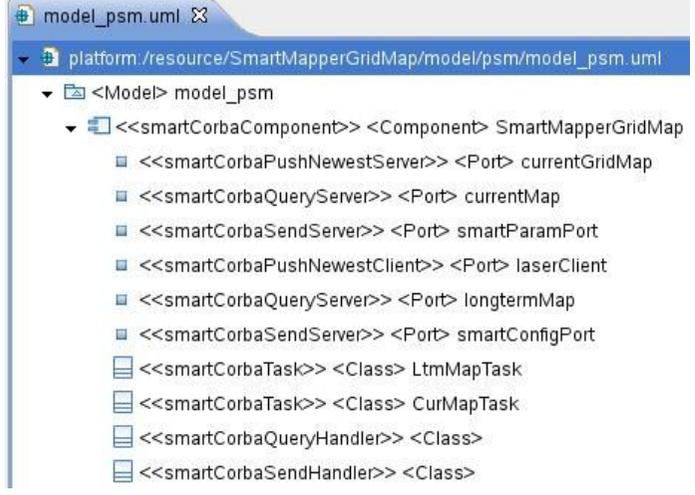

- requested/ provided services
- required resources
- QoS parameters

(key towards composability and resource awareness)

M2M
oAW
xTend

PSM

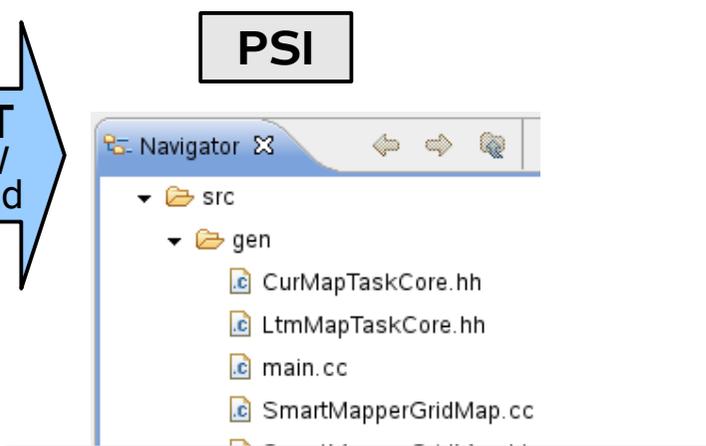

CorbaSmartSoft
CORBA based SmartSoft implementation

middleware and platform specific mapping from PIM to PSI

- interface to verify QoS parameters
- oAW workflow selects predefined and platform specific code blocks

M2T
oAW
xPAnd

```

#include "SmartMapperGridMap.hh"

// constructor
SmartMapperGridMap::SmartMapperGridMap() {
    std::cout << "constructor SmartMapperGridMap\n";
}

void SmartMapperGridMap::init(int argc, char *argv[]) {
    try {
        component = new CHS::SmartComponent("SmartMapperGridMap", a
        loadParameter(argc, argv);

// create ports
laserClient = new CHS::PushNewestClient<Smart::CommMobileL
smartParamPort = new CHS::SendServer<Smart::CommMapperParam
currentMap = new CHS::QueryServer<Smart::CommGridMapRequest
currentGridMap = new CHS::PushNewestServer<Smart::CommGridM
  
```

freedom to use any kind of library/ user code within component
